IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER Moriarty Water system Failed to Submit Corrective Action Within Required Time Frame

Este informe contiene información importante acerca de su agua potable. Haga que alguien lo traduzca para usted, o hable con alguien que lo entienda

Our water system recently violated a drinking water requirement. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did to correct this situation.

A routine sanitary survey conducted on November 15, 2021 by John Pijawka with the New Mexico Environment Department-Drinking Water Bureau (NMED DWB) found a cracked cement pad on well 6, a cracked electrical conduit line on Well 4, no O&M plan & no ERP, a leaking valve at the elevated storage tank and questionable NSF/ANSI 61 hose material at the water filling station.

We were to consult with the NMED-DWB regarding the appropriate corrective actions within 30 days as required by Environmental Protection Agency's (EPA's) Ground Water Rule. However, we failed to take these actions by the deadlines established by the NMED DWB.

What should I do?

- There is nothing you need to do. You do not need to boil your water or take other corrective actions. However, if you have specific health concerns, consult your doctor.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1-800-426-4791.

What does this mean?

This is not an emergency. If it had been, you would have been notified within 24 hours.

Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.

These symptoms, however, are not caused only by organisms in drinking water, but also by other factors. If you experience any of these symptoms and they persist, you may want to seek medical advice.

What is being done?

The Moriarty Water system has failed to turn in a CAP (CORRECTION ACTION PLAN) Within the 30 day rule. MORIARTY WATER SYSTEM has fixed and corrected all the deficiencies that was Found in the 2021 sanitary survey. No further action is required.
